

Ramp Landing: RLA100

Safety Every Step of the Way!

Be Specific—Specify Bustin for Safety!

New Product Announcement!

Finally! The perfect solution for ramp side door unloading!

When unloading conditions are restricted in space and require the driver to position the ramp parallel with the trailer, the **Bustin Ramp Landing** provides a large, stable platform to which the ramp can hook. The landing level is only 2—3 inches below the trailer floor level to provide a minimal drop when unloading with a hand truck. Although the landing is designed to readily handle a 650 working capacity, the aluminum materials combined with the wheel & track design makes deploying and stowing the **Bustin Ramp Landing** effortless.

Features:

- All aluminum construction for light weight and no rust!
- Large platform accommodates hand truck turning radius.
- Landing is rated for 650 lb working capacity, 1,000 lb static load capacity.
- Landing platform surface provides slip-resistance yet allows easy turning of hand truck.
- Stainless Steel Spring Latch automatically engages to hold landing in deployed position.

The Difference is in the *Details*:

The Ramp Landing rolls in and out effortlessly!
Bustin enclosures have **track** which permits easy deployment of the *Ramp Landing*. When you order the RLA100, be sure to also specify our PEZS001 enclosure. (Enclosure is steel powder coated gray and also accommodates our TAP-200 EZ-Out Safety Platform).

Be Specific—Specify Bustin for Safety!

The stainless steel spring latch automatically engages to hold the landing out for a secure & stable platform. To stow away the *Bustin Ramp Landing* simply push the spring in and roll the landing back into the enclosure. The stainless steel spring and the aluminum *Ramp Landing* will put an end to unsightly rust & related maintenance problems.
